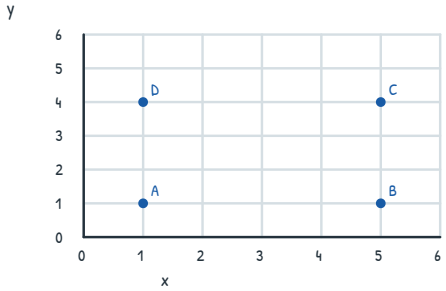
Find missing coordinates in a shape

I can... use coordinates to solve a geometric problem.

Complete a rectangle



Match vertical and horizontal positions

A = (1, 1), B = (5, 1), C = (5, 4).
D shares A's x-coordinate and C's y-coordinate.

D = (1, 4)

Check the side lengths

Width: 5 – 1 = 4 units

Height: 4 – 1 = 3 units
