Quadrilateral categories form a hierarchy

I can... explain how a quadrilateral belongs to more than one category.

Start with inherited attributes

Quadrilateral → four sides.
Parallelogram → two pairs of parallel sides.

Two branches can overlap

Category	Extra attribute
Rectangle	4 right angles
Rhombus	4 equal sides
Square	Both attributes

Explain the hierarchy

Every square is a rectangle and a rhombus. Both are parallelograms, so every square is also a parallelogram and a quadrilateral. The reverse is not always true.
