Factors and multiples are connected

I can… tell whether a number is a multiple of a one-digit number.

Can 42 counters make equal groups of 6?

6, 12, 18, 24, 30, 36, 42

$6 \times 7 = 42$

6 and 7 are factors of 42. The product 42 is a multiple of both.

42 is a multiple of 6.

43 is not: 43 ÷ 6 leaves 1.
