Three-digit multiplication: each place has a job

I can… multiply a three-digit number by a one-digit number using place value.

Part of 243	Multiply by 3
200	600
40	120
3	9

243 × 3 = 600 + 120 + 9

= 729

240 × 3 = 720

729 is close to the estimate. Every part was multiplied by 3.
