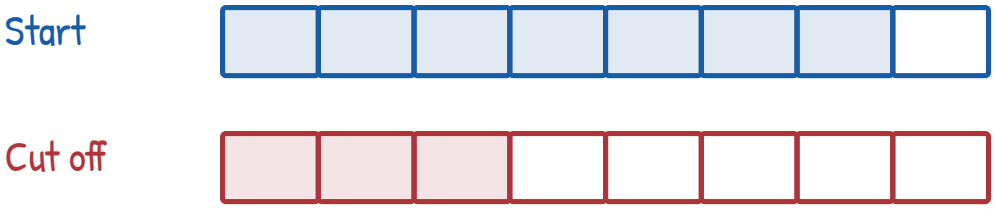
Fraction word problems: join or separate?

I can... use a visual model to write a fraction equation.

A ribbon is 7/8 meter long. Cut off 3/8 meter. How much remains?



7/8 − 3/8 = 4/8

4/8 = 1/2 meter remains

3/8 + 4/8 = 7/8

The denominator stays 8 because each part is still one eighth of a meter.
