Parentheses change which quantity comes first

I can... explain how parentheses change an expression.

Compare $4 \times (6 + 2)$ and $(4 \times 6) + 2$.

$4 \times (6 + 2) = 4 \times 8 = 32$

$(4 \times 6) + 2 = 24 + 2 = 26$

The first expression makes 4 groups of all 8. The second adds 2 only once. Each expression has two operations.
