Compare expressions without calculating everything

I can… explain a relationship between two expressions.

$A = 8 + 7$

$B = 3 \times (8 + 7)$

B contains 3 copies of the entire sum in A. It is 3 times the value of A.

$A = 15$; $B = 45$

45 is 3 times 15. Parentheses keep the sum together as one quantity.
