Multiplying by 0.1 or 0.01 makes smaller units

I can… explain multiplying by one tenth and one hundredth.

Expression	Meaning
48×0.1	one tenth of 48
48×0.01	one hundredth of 48

$48 \times 0.1 = 4.8$

$48 \times 0.01 = 0.48$

Each digit's value becomes one tenth or one hundredth as much. "Add zeros" does not explain this relationship.
