Divide by 10 or 100 using place value

I can... explain how division by 10 or 100 changes value.

Number	÷ 10	÷ 100
630	63	6.3
6.3	0.63	0.063

Dividing by 10 makes every value one tenth as much. Dividing by 100 makes it one hundredth as much.

$0.063 \times 100 = 6.3$

Use the inverse relationship to check.
