A remainder still needs a decision

I can… interpret a remainder in a whole-number division story.

Pack 1,250 cards in boxes that each hold 24 cards.

24 × 50 = 1,200; 50 cards remain.

24 × 2 = 48; 2 cards remain.

1,250 ÷ 24 = 52 R2

52 full boxes and 2 loose cards.
To hold every card in a box, use 53 boxes.

24 × 52 + 2 = 1,250
