Time conversion uses the given relationship

I can... use a conversion chart to convert a time measure.

Given	Find
1 minute = 60 seconds	2 1/2 minutes = ? seconds

2 × 60 = 120; 1/2 × 60 = 30

2 1/2 minutes = 150 seconds

Seconds are smaller units, so the numerical count is greater. The length of time stays the same.
