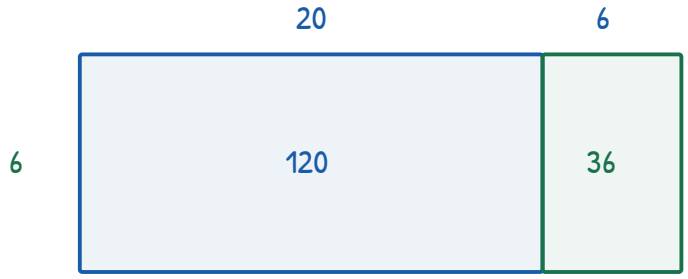
Break apart the dividend to divide

I can... use partial quotients and multiplication to explain division.

156 objects in 6 equal groups

156 = 120 + 36



Take manageable groups

Amount remaining	Groups of 6
156 – 120 = 36	20
36 – 36 = 0	6

156 ÷ 6 = 20 + 6 = 26

Check with multiplication

6 × 26 = 156
