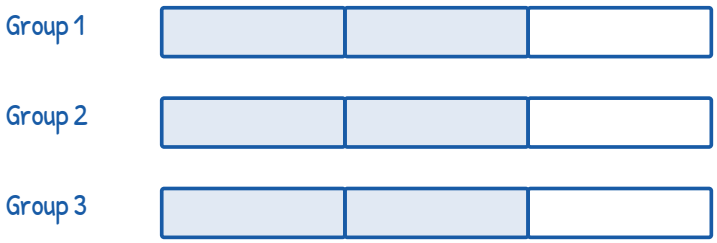
Multiply a whole number and a fraction

I can... use equal groups to explain whole-number multiplication with a fraction.

Three groups of 2/3



$3 \times 2/3 = 2/3 + 2/3 + 2/3 = 6/3 = 2$

A fraction of a set

1/4 of 12 counters: split 12 into 4 equal groups. One group has 3.

$12 \times 1/4 = 3$

Connect to a story

Three ribbons are each 2/3 meter long. Their total length is 2 meters.
