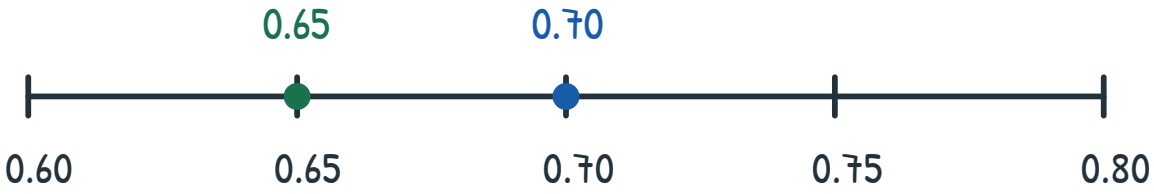
Compare decimals by value

I can... compare decimals to hundredths and justify their sizes.

Use the same whole

0.7 = 70/100 • 0.65 = 65/100

Locate both numbers



Explain the comparison

0.7 > 0.65

70 hundredths is greater than 65 hundredths. More written digits does not mean a greater number.

0.65 is not greater just because 65 > 7.
