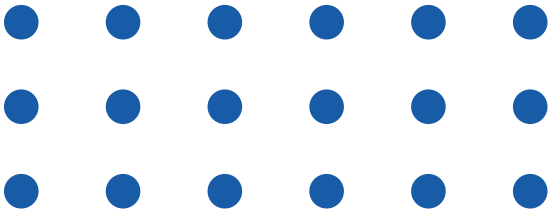
Connect the model and equation

I can… explain how my drawing matches my equation.

Objects → drawing → equation



3 rows

6 in each

3 rows × 6 in each row = 18 dots

Keep the meaning

Each row is one equal group. Every dot is one object. Counting all the dots gives the product.

Use a related equation

18 ÷ 3 = 6

18 objects shared into 3 equal rows gives 6 in each row.
