Convert larger metric units to smaller

I can... use multiplication to convert a larger metric unit to a smaller unit.

Know the unit relationship

1 m = 100 cm

1 kg = 1,000 g • 1 L = 1,000 mL

Build a conversion table

Meters	Centimeters
1	100
3	300
8	800

3 m = 3 × 100 cm = 300 cm

Explain the size

The length stays the same. Smaller units require a greater number of units to measure that length.
