# Same area, different perimeter

I can... compare rectangles with a fixed area or a fixed perimeter.

## Keep the area at 24 square units

| Dimensions | Area | Perimeter |
|---|---|---|
| 1 × 24 | 24 | 50 |
| 2 × 12 | 24 | 28 |
| 3 × 8 | 24 | 22 |
| 4 × 6 | 24 | 20 |

## Keep the perimeter at 20 units

| Dimensions | Perimeter | Area |
|---|---|---|
| 1 × 9 | 20 | 9 |
| 2 × 8 | 20 | 16 |
| 4 × 6 | 20 | 24 |

## What do you notice?

Equal areas can have different perimeters. Equal perimeters can enclose different areas.
