Our math work routines

I can… start, work with a partner, and get help independently.

Start ready

1. Sit down and take out your notebook and pencil.
2. Read the posted problem.
3. Start silently. Show your thinking.

Work with a partner

Think first → take turns explaining → compare models.
Both partners write. Both partners can explain.

When I am stuck

Reread → draw what I know → use a tool → ask a specific question.
"I know the total. I need help finding the group size."

Finish

Check your work. Put tools back. Complete the exit ticket independently.
