Multiply a one-digit number by tens

I can... use place value to multiply a one-digit number by a multiple of ten.

Four groups of 30

Groups	30	30	30	30

Count tens first

4 × 3 tens = 12 tens

Name the value

12 tens = 120 → 4 × 30 = 120

The zero is a result of counting tens, not a trick added to a fact.
