Survey questions and frequency tables

I can... collect categorical data and organize counts in a table.

Ask one clear question

Which fruit is your favorite: apple, banana, orange, or grape? Each student votes once.

Organize the votes

Fruit	Votes
Apple	8
Banana	6
Orange	4
Grape	2

Check and interpret

8 + 6 + 4 + 2 = 20 students

Apple has the most votes. Apple has 2 more votes than banana.
