One number, different forms

I can… read and write a number in standard, word, and expanded form.

Place each digit

Ten-thousands	Thousands	Hundreds	Tens	Ones
4	0	6	0	8

Three ways to name it

Standard: 40,608
Word: forty thousand six hundred eight
Expanded: 40,000 + 600 + 8

Zero holds a place

There are no thousands and no tens. The zeros keep the other digits in the correct places.
