Compare decimals to thousandths

I can... justify a decimal comparison using place value.

Line up units of equal value

Ones	Tenths	Hundredths	Thousandths
0	6	7	0
0	6	0	7

Find the first difference

0.670 > 0.607

Explain

Both have 6 tenths. The first number has 7 hundredths; the second has none. Thousandths cannot outweigh that difference.

0.67 = 0.670
