Divide by a two-digit divisor

I can... use partial quotients to divide and explain a remainder.

Divide 1,725 by 24

Subtract groups of 24	Partial quotient
1,725 – 1,200 = 525	50
525 – 480 = 45	20
45 – 24 = 21	1

Combine the groups

1,725 ÷ 24 = 71 R21

Check and interpret

24 × 71 + 21 = 1,725

If 1,725 people need buses with 24 seats, 72 buses are needed.
