# Decimal divided by a whole number

I can... explain decimal division as equal sharing.

## Share 1.2 liters among 3 bottles

1 whole

0.2

There are 12 tenths altogether.

## Share the tenths equally

12 tenths ÷ 3 = 4 tenths

## Record and check

1.2 ÷ 3 = 0.4 L per bottle

3 × 0.4 = 1.2
