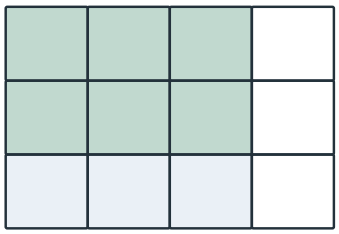
Multiply fractions using overlap

I can... use an area model to explain multiplying two fractions.

Find 2/3 of 3/4



6 overlap parts out of 12

Count overlap parts

2/3 × 3/4 = 6/12 = 1/2

Explain the units

The whole is divided into 12 equal parts. Three fourths selects 3 columns. Two thirds selects 2 rows of those columns. Six parts overlap.
