Multiplication can shrink or grow

I can... predict how a positive multiplier changes a number's size.

Take less than one copy

$8 \times 1/2 = 4 < 8$

Take exactly one copy

$8 \times 1 = 8$

Take more than one copy

$8 \times 1\ 1/2 = 12 > 8$

Explain

For a positive starting number, a multiplier less than 1 takes part of it. A multiplier greater than 1 takes more than one copy.
